DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kowshik et al. (USP 5,625,544) in view of Soneda et al (USP 5,86,918). Kowshik (see figure 3A below) discloses a diode chain circuit (200a) that is connected between the input and output circuit except for having a multiplier circuit having a switching capacitor circuit for charging the capacitors in parallel and discharging them in parallel. Soneda discloses that it is known in the art to provide a multiplier circuit having a switching capacitor circuit for charging the capacitors in parallel and discharging them in parallel. It would have been obvious to one having ordinary skill in the art at the time of the invention was made to provide the multiplier circuit having a switching capacitor circuit for charging the capacitors in parallel and discharging them in parallel of Soneda with the diode chain circuit (200a) that is connected between the input and output circuit of Kowshik, in order to provide a pumped diode chain type circuitry with a switch capacitor circuit that is able to decrease the number of charge pumping circuits for obtaining a desired high voltage by increasing the efficiency of raising or lowering the voltage to give a stable output with a low power loss.
